

WHAT IS CLAIMED IS:

1. A toy comprising a body, a roller combined under said body to enable said toy roll on a surface: and,

5           Characterized by said roller made of a mixture of TPR (thermal plastic rubber) and white oil and having some viscosity, provided with a center shaft hole for a shaft to extend and be fixed firmly therein, two ends of said shaft supported in a C-shaped notch of a clamp plate fixed respectively on two inner sides of said body, said toy possible to roll  
10       down slowly a slope or a vertical wall surface without falling off,

2. A toy comprising a body, a roller combined under said body to enable said body to roll; and,

          Characterized by said roller made of a mixture of TPR (thermal plastic rubber) and while oil and having some viscosity, said roller  
15       having a center shaft hole, a U-shaped rod having one bent end portion extending in one end of said center shaft hole and the other bent end portion connected with a position plate fixed firmly on a flat inner wall of said body, said toy possible to roll down slowly on a slope or even a vertical wall surface,

20           3. The toy claimed in Claim 1 or 2, wherein said roller has a plurality of lengthwise convex protrusions spaced apart equidistantly on its outer circumference.
